EDUCATION

Master of Science in Computer Science **May 2026**
The University of Texas at Dallas, Texas, USA CGPA: 3.8 / 4.0

Bachelor of Technology | Computer Science and Engineering (Artificial Intelligence & Robotics) **April 2024**
Vellore Institute of Technology (VIT), Chennai, India CGPA: 3.64 / 4.0

TECHNICAL SKILLS

- **Tools & Software –** Google Cloud Platform (GCP), Microsoft Azure, UiPath, Microsoft Power BI, n 8 n , Arduino IDE, Raspberry Pi, Databricks, MongoDB, Docker, Jenkins, GitHub, Kubernetes, Minikube, Copilot Studio, Microsoft Fabric, Weaviate, Arize Phoenix
- **Programming Languages –** Python, SQL, Java, JavaScript, React, R, MATLAB, C, C++, HTML, CSS, PySpark

EXPERIENCE

Software Developer **May 2025 – Present**
Coventus AI Solutions, Richardson, Texas, USA
| Browser Automation | Large Language Models (LLMs) | Artificial Intelligence | Natural Language Processing | Web Crawling | Python |

- Developed an AI-powered web automation framework for vBots using Playwright, OpenAI, GPT4, Llama LLMs to intelligently extract selectors, automate secure navigation and retrieve policy documents from insurance carrier portals.
- Integrated Hugging Face embeddings, LlamaIndex and BeautifulSoup for semantic chunking and natural language query interpretation with LLMs for dynamic selector detection and end-to-end web automation.

Deep Learning Intern **May 2023 – June 2023**
Department of Computer Science, VIT Chennai, India
| Ensemble Neural Network | CNN architectures | Machine Learning | Python | TensorFlow | Keras |

- Developed an ensemble deep learning model that combines different 5 CNN architectures (ResNet50, VGG16, MobileNet, Xception, and NASNet Large) to enhance the accuracy of classifying the stages (benign, early, pre, pro) of Acute Lymphoblastic Leukemia (ALL) from microscopic white blood cell images of patients.
- Successfully achieved a precision of 96.87%, providing accurate results aiding in early diagnosis.

PROJECTS

Cloud Monitored RAG – Secure & Observable Retrieval-Augmented Generation
| Google Gemini | Vertex AI | RAG | Weaviate | BM25 | OpenTelemetry | Arize Phoenix | Flask | Streamlit | Docker | Google Cloud |

- Designed and developed a secure, cloud-oriented RAG application for enterprise PDF knowledge bases, integrating hybrid vector and BM25 retrieval with Gemini 2.5 Flash for source-grounded, cited responses. Implemented prompt-injection guardrails, source-coverage validation, and end-to-end observability with OpenTelemetry and Arize Phoenix to monitor retrieval quality, latency, and token usage, with Flask APIs and Docker-based deployment configurations for Google Cloud Run.

CenterMind AI - Hybrid Memory Multi-Agent Platform for Data Centers
WeHack 2026 Hackathon Winner - Major League Hacking
| Google Gemini | AI Agents | Multi-agent Systems| LangGraph | Neo4j | Redis | FastAPI | Python|

• Designed and developed a hybrid-memory (Redis + Neo4j) for real-time data center monitoring, predictive maintenance, and infrastructure planning. Agents detect anomalies, predict failures, recommend optimal expansion strategies, and deliver explainable decisions with human-in-the-loop feedback.

Coronary Stenosis Detection and Severity Assessment from Coronary Angiograms
| Python | Neural Networks | Computer Vision |

- Developed an automated deep learning system to detect stenosis from coronary angiograms, determine the severity level of the disease and predict the optimal dimension of stents to be used for intervention using computer vision.

CERTIFICATIONS

- **Microsoft Certified: Security, Compliance, and Identity Fundamentals**
- **Microsoft Certified: Azure AI Apps and Agents Developer Associate**
- **Anthropic - Claude Code in Action**
- **Anthropic - Model Context Protocol: Advanced Topics**
- **Microsoft Certified: Azure AI Engineer Associate**
- **Microsoft Certified: Azure AI Fundamentals**
- **Google Cybersecurity Professional Certificate**
